good day everyone

i try to read table from database, here is my code

```
result=objRS->MoveCursor(/FIRST)
```

```
WHILE (result) DO BEGIN
```

```
    data=objRS->GetRecord()
```

```
    result=objRS->MoveCursor(/NEXT)
```

```
ENDWHILE
```

```
PRINT,data
```

but data variables contains only last record

so...how i can create one data variable for all records ?

Thanks
