Thanks Jean.

I've tried and it works...but I've got a problem with the new images i made: they seem to be negative (check: www.gurumeditation.it/smallimage.tiff). The problems is reading the tiff: to check this idea I wrote two lines

```
Result = READ_TIFF( 'D:\RSI\IDL56\WORKING\image.tif',  
GEOTIFF=variable)  
tv, result
```

and it gives me the same error.

There's something wrong that i don't understand?

Before I opened the geotiff with `envi_open_data_file`, got it in a variable with `ENVI_GET_DATA` and wrote it with `write_tiff` using the geotiff keyword.

lo
