Yes, one that isn't hard coded :)

The best approach would be to make the user responsible. Throw up a dialog or two to select a data/temp/whatever directory (dialog_pickfile). Otherwise you're asking for it. If you really want the frustration, download Jim Pendleton's sourcepath.pro from the ITTVIS code contrib site:

<http://www.itvis.com/codebank/search.asp?FID=347>

You can distribute your application (.sav) with a set of directories where it looks for and writes data. sourcepath will allow you to get the file path to those directories no matter where your application directory exists.
