Hi Group,

I'm looking for a sample data set for a program I'm writing. It is a
rather generic multi-variate data browser similar to slicer or the
thunderstorm data, but with a more intuitive and powerful UI. I have
some sample data sets that I am using for testing, but none that have
everything I need.

I'm using the thunderstorm demo data for testing the vector stuff, and
I have another group of variables that are 4D (time inclusive), but I
do not have anything with U/V/W vectors and time.

If any of you have a spare atmospheric, oceanographic, or any other
multi-variate 4D data sets I could use for testing I would very much
appreciate it. I'd be pleased to supply you with the code too if you
would like to use it to browse your data.

My ideal data set would have 3 or more variables in addition to U/V/W.

Thanks,

   -k.
