Hello,
I have posted on sthng related to this before so it is somewhat
related. I want to share my program to others who only have IDL VM. I
was advised it would be easier to make all my procedures into a
project to export. I had initial problems running the project but
thanks to this post (http://groups.google.com/group/comp.lang.idl-
 pvwave/browse_thread/thread/e7b97975f5cf9a2a/5b64588c8b0b9e5 1?
lnk=gst&q=project&rnum=16#5b64588c8b0b9e51)
was able to run the project. Now I am not sure how to export it so
that I can run on VM? I tried saving the project as a .sav but that
did not work (when I used to small icons on the project bar) but did
when I tried a save as from the File menu. However that .sav program
does not work in VM. It gives me an error about using restore.

Is restore not a command that is able to be shared?
Thanks,
RP
