
Subject: using cursor on multiplot data

Hello.

Before I re-invent the wheel, is there some method that already exist to do the following:

I'll like to make multiple plots on a page, and then use cursor to extract a value from a panel which is not the last panel plotted. Something along the lines of:

```
!p.multi=[0,4,3]  
for k=0,11 do plot,findgen(10)
```

;....select a panel here somehow, and then

```
cursor,x,y,/data  
;end
```

It seems like someone would have some code that does this sort of thing, but I haven't been able to find it.

Thanks,

Mark
