Subject: more IDL/Leopard issues
Posted by dktr.ted on Tue, 30 Oct 2007 06:20:20 GMT

Hi all,

I recently switched to a Mac laptop and installed IDL 6.4. I upgraded
to Leopard last Friday. Now when I start IDL, the X11 icon starts and
I see the IDL 6.4 splash window, but after that goes away the IDLDE
app quits. Being a newcomer to Macs I'm not sure where to begin
fixing this. Any tips?

Ted
