---

I have install a fedora 7 linux under a virtual machine (vmware workstation) and i have install IDL v6.4 ENVI v4.4 & ENVIZOOM v4.4. IDL and ENVI works Perfect. When i try to start envizoom from a terminal or direct from envi or direct from idl the time that envizzom starts and maximizes the application window the same time the system logout and i have to login back again and ofcourse i can not run envizoom... Any idea what should i do to fix this problem

Thanks

Kostas
