Look, you undoubtedly ran into some leftover heat
from a disagreement I had earlier with my wife. So
my apologies if I seemed overbearing. Misplaced anger,
no doubt.

But, this took me less than a minute to research:

```
a = ['Col 1', 'Col 2', 'Col 3']
b = [ 1, 2, 3]
void = Write_SYLK('test.sylk, {a:a, b:b})
```

If you have actually tried something and it didn't
work, let us know. It will at least alert us to the
fact that you are willing to do some work.

Cheers,

David
