Subject: ENVI Classification Image to ROIs
Posted by charliehemlock on Thu, 08 Nov 2007 02:58:49 GMT

Hi,

I'm looking for an easy way to take an ENVI Classification Image and
take each class from it and export each as a separate ROI. (I'm not
creating a classification from roi's - the opposite)

I could use "band threshold from ROI" - but this is time consuming if
you have several classes and images. It seems like there should be an
easy way to do this...hopefully there's a simple solution out there
that I'm just missing.

I'm using envi 4.3

Thanks!

CH
