For anyone who's used D Fanning's colorbar program-

When using colorbar pro, how can I get the values of the tickmarks (!
x.tickv doesn't work - return an array of 0's)?

Here's the underlying reason, when annotating the color bar, the
program (seems to one be able to) annotates the major tick marks. I
actually would like my tick labels not on the major tick marks, but
"in the middle" of the color. I think this would correspond to (only)
labelling the minor tick marks.

Maybe a visual would help me be more clear:

Instead of labelling:

```
here  here  here
|-----|-----|
```

I would like:

```
here  here
|-----|-----|
```

I've been fooling around with the parameters, but to no avail. Anyone
else have this need/want before? Anyone have any ideas to accomplish
this?

Thanks,
Phillip
