I'm cutting up an array of filenames, starting something like this:

```
p1=strpos(res,'\,/reverse_search)
p2=strpos(res,.',p1)
```

...and am surprised to get this message:

STRPOS: Expression must be a scalar or 1 element array in this context: P1.

I was half-expecting to have to transpose p1, but that it's not allowed at all seems an omission to me. Is there any reason for that?

regards,  
Greg
