Ok, I want to draw 2 different graphics in the same IDLgrPlot object,
or in the same area in my application.

With a simple command line we can do PLOT, x1, y1.. and then OPLOT,
x2, y2..
With that we can visualize 2 different graphics in the same window.
IDLgrPlot objects has a different functionament and I want to draw in
a the same area 2 plots. Is for these reason that I ask if it's
possible.
I think that it's imposible because, as you say, IDLgrPlot object "is"
a plot.

The solution is draw the plots in differents graphic object and
visualize in the same area together??
