Subject: Can IDL calculate the confidence level about correlation

Dear All,
I've already know how to calculate the critical Pearson correlation
coefficient (Rc) for a determined confidence level (for example 0.01).
In this approach, I set a confidence level and judge whether the
correlation coefficient R reaches this level.
Now I wonder can I calculate the confidence level directly from the
correlation coefficient R. In this approach, I can directly see the
confidence level for the known R. This way seems a little lazy, but
may be more convinent.
Could anyone help?
Thank you!

Lin
