I'm guessing that the widgets might move to something more like java.
It's great that the JVM is now shipped with the IDE, I've had
difficulties initialising the java bridge prior to this release.

All I have to do is

setenv IDLJAVAB_LIB_LOCATION /usr/local/itt/idl70/idlde/bin.linux.x86/
jre/lib/i386/client

/usr/local/itt/idl70/bin/idl -32

and my IDL-java bridge is ready.

Robbie
