
Subject: Custom formatting under version 7.0?

I have been using the new eclipse-based DE for the past few days and overall I like what I see. One thing I can't figure out yet is how to modify the auto-formatting rules to force my code to line up with parentheses, like this:

```
res = my_func(arg0, arg1, $
              key1 = key1, $
              key2 = key2)
```

I would like the lines that follow an open parenthesis to automatically indent to that same column. I don't know if the above example will show it since it probably depends on viewing this post with a fixed width font.

Anyhow, does anyone know if this is even possible with the new DE?
Thanks!

Pierre
