I'm getting tired of being a pessimist, but after
closing all my other windows, except for the IDL Workbench,
I managed to get the IDL Help working. So, the first thing
I looked at was the What's New in IDL 7.0. (Just looking
for some good news, really.) I see there is a new
routine Routine_Filepath. So I tried to look that up
in the Index. Nada. I mean, just nada.

If I click the link in the What's New section I get
an HTTP error that it couldn't find the right file.

I'm discouraged.

Cheers,

David
