MY BOSS is upset because he doesn't know what IDL is, and if he is upset, i'm upset, too ( you know what I mean ).

Please let me know :

- what is IDL (a know only it is a graphyc package ) ?
  - is it a standard or a commercial package ?
  - if it is a commercial one where is possible to buy it ?
- on which kind of computer does it run ?

Thanks a lot for your survival ( for me ) replay.

fabrizio ravegnani.
