Hi people,

I've a question related with IDLgrClipboard. I want to save in PS file my program view and I specifies the dimensions in the IDLgrClipboard.

```
self.myClipboard->SetProperty, DIMENSIONS=[20, 15], UNITS=2  
self.myClipboard->Draw, self.myView, /POSTSCRIPT, /VECTOR,  
FILENAME=filename
```

My problem is the position of my view in the PS file. I want a centered image but I dont know how to do that. IDLgrClipboard hasn't location keywords or something else similar and my view is represented offscreen in a file ...

Can anyone help me ?
