**Subject: Centered VIEW in PS file using IDLgrClipboard**
Posted by natha on Thu, 06 Dec 2007 23:43:29 GMT

Hi people,

I've a question related with IDLgrClipboard. I want to save in PS file
my program view and I specifies the dimensions in the IDlgrClipboard.

self.myClipboard->SetProperty, DIMENSIONS=[20, 15], UNITS=2
self.myClipboard->Draw, self.myView, /POSTSCRIPT, /VECTOR,
FILENAME=filename

My problem is the position of my view in the PS file. I want a
centered image but I dont know how to do that. IDLgrClipboard hasn't
location keywords or something else similar and my view is represented
offscreen in a file ...

Can anyone help me ?
