Thanks for making me feel better David!

The index tab at the bottom is really useful,
and now I feel like I am a little closer to where
I was before. Using the index and Firefox will get
me by for now.

What about the "Bookmarks" button that looks a lot like
the new tab button? Does anyone know where do those
bookmarks go?

Also, is anyone facile with Eclipse plugins? If so, is it
possible to do all sorts of Eclipse plugin applications
to make up for the initial perceived shortcomings?
