Well, I don't use the Perforce plugin, but the Subclipse Subversion plugin adds things like:

- * a entry in the "New Project" menu that allows you to check out a project
- * context menus for files/directories in a Subversion project that let you do Subversion actions like update, commit, diff, etc.
- * decorators on file/directories that indicate which files have been changed, what revision they are on, when they were last checked in, etc.

None of these things are visible until you create a new Subversion project using "New Project".

I would assume that the Perforce plugin has a similar workflow.

Mike
