OK, so I actually use Perforce on this machine, so I thought I might as well have a go with that. No problem following the installation directions on the page pointed to with the Perforce URL above.

I successfully downloaded the plug-in and installed it. I was asked if I wanted to restart the IDL Workbench. "Sure, why not?" Now it is up here in front of me and looks EXACTLY like it used to. I don't find any new buttons, menu items, etc. that would give me a clue as to what I am suppose to do next.

I guess I naively expected I might have to check a file out, set up a repository, *something*. I don't even see a Plug-In menu. Does anyone have more clues for me?

Thanks,

David
