Maybe this is more reproducible than I thought. It appears
that ANY time I start up in the SNV Repository perspective
I throw an error switching to the IDL perspective. (I thought
perhaps if I waiting a sufficient length of time to allow
code analysis I wouldn't have the problem, but that doesn't
seem to help.) The error, and their are two of these, is

   "An error occurred while automatically activating bundle
   com.rsi.idldt.ui (24)"

Cheers,

David
