Well, unless I am missing something (likely), you have to
change perspectives to work with the Subclipse plug-in, too.

This could be made a lot less onerous if I could somehow
put the SNV Repository perspective in the *top* of the
Open Perspective menu instead of always having to choose
Other to get there, and then having to choose Other again
to get back to the IDL perspective. I have a feeling this
is probably a configurable item, but if so, I haven't found
the right magical incantation to make it happen.

Cheers,

David
