Subject: call_external with common blocks?
Posted by chs11 on Thu, 01 Feb 1996 08:00:00 GMT

I've got a bunch of FORTRAN routines which use several common blocks
to store and share information. I have also written wrappers in IDL
to use call_external to call these functions. But they don't work
because of these common blocks. Does anyone know how to set up the
storage for the common blocks? (I'm using SunOS 4.1.3).
