
Subject: Compiling error in Envi batch mode

Hi, I'm running an idl programm in Envi batch mode. I used the "envi,/restore_base_save_files" in the beginning of the programm, however, I sometimes got compiling errors about the Envi functions used in the programm. I did use [] instead of () for my arrays, why I'm getting this compiling error? Do I have to use Forward_function for all of the Envi functions?

Any ideas how to avoid this?

Thanks,
Jenny
