But, no one has really answered this question directly:  
No way to ADD a directory of files directly to the repository via IDL, is that right? The project (and by extension, the directory) needs to be created from the repository first, then files added, then you can commit those files to the repository. But someone has to muck with the repository first. This can't be done from inside of IDL. Am I correct in this?

Cheers,

David
