You can certainly write programs in IDL 7.0 for use in ENVI batch mode, but you'll still have to test the programs and run batch mode in the version of IDL that shipped with your ENVI distribution (e.g., 6.4 for ENVI 4.4). The current 7.0 distribution has no idea that ENVI even exists, so attempting to call ENVI procedures and functions will result in lots and lots of "undefined procedure/function" errors. The next release of ENVI *should* be linked to 7.0.
