Thanks a lot, Mat. Now I have a headache.

My take on this is that you are treating IDL like C, C++, FORTRAN (pre-
F90), ... You managed to suck me (and apparently everyone else) into
the same thought pattern with that convoluted little piece of code.
Now that I've cleared my mind, why can't you just do:

```
CASE mc OF
   1:   t = d
   ELSE: t = s
ENDCASE
 ... working on t
```

Ed
