Subject: Bug in PV-Wave 6.0
Posted by rkj on Fri, 09 Feb 1996 08:00:00 GMT

I recently encoutered a problem with the CURSOR
function in PV-Wave 6.0. It seems that
normalized device coordinates are not defined
properly on early copies of 6.0. I was getting values
greater than 1.0. When I contacted technical support
they said they were aware of the problem and
have in fact already fixed it. It seems strange
that they did not contact all the people who
received bad versions. However, they have mailed
me the corrected version (6.0.1). It is also
available via ftp.
