OK, found this an deleted it. Asks where I want my workspace, etc.,
so this appears to work. No joy with the switching perspective
problem, though.

I'm not sure how to do this. In a command window I changed
to the C:\Program Files\ITT\IDL70\IDLDE directory and then
typed: "idlde.exe -clean"

IDL started, but I was told it couldn't find a file named
"clean", so I guess this didn't work. Can you tell me how
to launch the Workbench with the clean option?

Thanks,

David
