
Subject: Problem Accessing Shared Objects

Folks,

I had an occasion today to access a shared object library on a UNIX machine. This worked correctly in IDL 6.3, but completely crashed IDL 7 when I tried to access it today.

I've looked on my web page, and in the IDL newsgroup archives for information, but have completely struck out. And yet, I vaguely recall something about some kind of header file in IDL changing in the transition from IDL 6.3 to 6.4, and need for re-compiling, etc. It's just not coming in clearly.

We have tried re-compiling the SO, but we haven't yet been successful in not crashing IDL. Am I dreaming, or does someone else remember something about this?

Cheers,

David
