
Subject: interface between IDL and Matlab

Hi,

I've been using IDL for data processing/analysis, so most of my code (data readers/writers, and utility code) are in IDL. However, lately I was asked to explore possibility to use Matlab's statistical visualization toolbox. I don't want to re-write my data processing code in matlab or write my own statistical visualization in IDL, what other options do I have? Is there a way to call Matlab from IDL or vice versa? Thanks in advance.
