Dear all,

I would like to plot a contour line figure, filled with colors.
Thereby, positive values should be red-shaded filled, negative blue-
shaded filled, and white shade around the zero.

Now, I have checked the color table in IDL, and none of them seems to
have this configuration? If possible, I would like to define the
colors myself in fixed intervals, like [-10,0] = light grey, [0] =
white, [0,10] = darkgrey,.... [10,20] = light red, ...

Hope somebody can help me with this!

Cheers,
Matthias
