Hi,

a very nice improvement the eclipse workbench !

Some questions from one using it already with different other languages.

1. Is there a way to add the idl dev environment to an already existing
   eclipse setup?
2. Is there an other update extension planned as using the
   Software-updates feature? A shell command without X would be nice on
   a unix system. (probably on a win system too, where the user has no
   admin rights) Or does one know about something similiar?
3. cvs is one of the oldest revision control systems. Do you have plans
   to include others on default. e.g. mercurial
   (http://www.selenic.com/mercurial/wiki/)

that's for now. I do look now closer into the improvements. :)

cheers
Reimar
