My major problem with the Workbench is non-reproducible problems. Last night, I had another. I had a partial command written on the IDL command line. To complete it, I wanted to paste a filename from another application. I copied the filename, put my cursor at the end of the command in the Command Line and pasted. The pasted text immediately shows up in the Console window, but I can't get it to show up on the Command Line and eventually I had to type the damn file name.

This is not the first time I have seen this, but when I have time to get back to it, pasting always seems to work correctly. :-(

Cheers,

David
