Subject: Overlaying where data
Posted by jtmcahill on Thu, 24 Jan 2008 20:39:17 GMT

Hello,

So, I've got a tvscl image that I've done some analysis on.  With the
where function I've found some places I want to highlight in that
image by overlaying those areas with some color.  I've managed to do
something close with the tv function but it changes the color of the
original tvscl image and the highlighted area is a barely
distinguishable (washed out red color).  Does anyone have any ideas on
how to do this.  I'm not contouring or anything special, just found
significant area in an image and want to highlighted so I can point
and say "there is where there is a significant amount of X".

Thanks
