---

I'm running the new workbench under windows xp and teaching a numerical physics class using it.

Many interesting features have popped up (but thats a story for a different post)

I know that ms word cannot be used to created idl .pros cuz it inserts all sorts of wierd characters.

But to convince my students of this fact, I was wondering if there was a doc SOMEWHERE in the idl help pages that states which editors are suitable for creating idl programs OUTSIDE the workbench.

Thanks Mucho,

More news later on the "workbench features"-urgh!
