Folks,

I make all kinds of recommendations about books:

http://www.dfanning.com/reading/coyote_reading.html

But seldom do I rave about a work-related book. But Datums and Map Projections by Jonathan Iliffe is an exception. Most map projection books are either too technical, too focused on a particular application, or too boring to be read. This small, lucid book is none of those things. He has a new version coming out Feb 15th. I've already ordered my copy. This is one book I want sitting near me on my shelf.

Cheers,

David
