I am having some difficulty with a float slider in my application.
I would like to be able to dynamically change the max and min
values of the slider from the xmanager. I can do this with a
regular slider using; widget_control, (widget_id), set_slider_max = 5
(or some other int), however the same procedure does not
work with the float slider.

Does anyone have any suggestions? Any help would be greatly
appreciated.

Thanks,
Brett
