---

Cummins has ported WAVE to the QNX real-time operating system, and I am overseeing the WAVE software development. Like DEC-ULTRIX, QNX does not support dynamic linking of user written C functions. I am investigating different methods for calling user written C functions from WAVE. For example, using RPC, OPI, and SPAWN. Does anyone especially DEC-ULTRIX users have any examples and methods which may be useful to me.

Thank you,
