Hi David

I guess the plot routines don't have unicode support while the eclipse
platform editopr has.
If I change the editor to iso-8859-1 all my german Umlauts are written
right and running a program from within the editor does go well.

If I like to use the idl command line or idl prompt it fails. Because
that is always defined to use unicode and I don't find a switch to setup
iso-8859-1

isn't shown in the resulting plot. Using a print

works because the console output is unicode defined too.

cheers
