## Subject: Calling a user's C program.
Posted by Mark &amp; Marcel Wri on Sat, 17 Feb 1996 08:00:00 GMT

Hello,

For the last three years I have been working with PV-WAVE.   I am a Senior Engineer at Cummins Engine Co. in Indiana and have a MSEE. Previously I was a Faculty at the University of Florida.

Cummins has ported WAVE to the QNX real-time operating system, and I am overseeing the WAVE software development.  Like DEC-ULTRIX, QNX does not support dynamic linking of user written C functions.  I am investigating different methods for calling user written C functions from WAVE. For example, using RPC, OPI,  and SPAWN.  Does anyone especially DEC-ULTRIX users have any examples and methods which may be useful to me.

Thank you,

Mark Wright
Senior Engineer
Cummins Engine Co.
