Hi Chris

Thanks for your reply. I'm reluctant to use advanced fitting programmes as I'm an undergraduate trying to do an MPhys Project and I'd rather try and code as much as possible myself so I can get credit for it.

Luckily, I have found a way to do a fit for 2datasets now - by putting them all into one big array, so hopefully I can extend this further so I put 2000+ datasets in one array and then fit an exponential to that new array.

Thanks for all your help
Chloé
