
Subject: XMP metadata in JPEG & PNG images?

Greetings,

I have a pressing need to add metadata into JPEG and PNG image files and the current IDL READ/WRITE_JPEG/PNG functions do not support metadata or comments. I wondered if anyone has already developed any procedures that either do this or could be modified to do this?

Ideally, this would be done using the XMP standard for tagging images so I can put my FITS WCS astrometry directly into the images using the VO (Virtual Observatory) approved AVM (Astronomical Visualization Metadata) standards.

Thanks in advance,

-Brian
