Dear all,

I don't know if I am stupid or something does go wrong.

I couldn't figure out how to get it works.

Please give me some advices or comments.

I tried to use IDLffDICOM to read the images from a dicom file.

The image data uses 4 bytes for one pixel.

The IDLffDICOM object only returns me the UINT array (correct dimension), but the data type is not correct (I want LONG). Is there any way to do it with IDLffDICOM object? Or I do need to use IDLffDICOMEX?

Thank you very much,

Rendi
