Hi Chris,

Thanks for your suggestion. I don't have a lot of experience with the ps device either, which is part of why my attempts to use the ps option have been shots in the dark. Your suggestion does give me a quick fix. My image quality is degraded and the text is grainy, though, and there is something unsatisfying about having to do an image format conversion afterwards. I'm still holding out for suggestion for how to solve this problem with the Z buffer or something clever... but until then I'll implement this and at least I'll have something that basically works.

Thanks again,

Kathryn
