Hi, all. I knew there are some issues to install old version IDL on MacBook Pro.

This is what I got:

```
% X windows protocol error: BadRequest (invalid request code or no  
such  
operation).  
Installation number: 001.
```

But I still could run my codes and get results. I have not explored a lot but it seemed to me IDL works just fine. It is just a little annoying to see this error message. However I do worry that how reliable about these results. Please let me know if there might be some potential problems. Thanks.

Xia
