Hi folks,

Would anyone of you know how to implement a mechanism similar to the one used for the IDL help command to stop the text streaming on your terminal when it is full?

IDL>help

.....

here the help content

.....

.....

< Press Spacebar to

continue, ? for help >

I'm writting a program that displays many "print" lines, and I would to stop and prompt the user to continue whenever "the screen is full".

Any hints?

Thanks,

Nicolas
